

DRY-FIRE WEAPON

CONVERSIONS FOR PRISim®

DRY-FIRE WEAPON CONVERSIONS

Every PRISim® dry-fire laser weapon is fitted with a modified barrel, which accepts the AIS laser insert. All lasers are Class 1 eye safe. These weapons have no recoil. Pulling the trigger activates the laser.

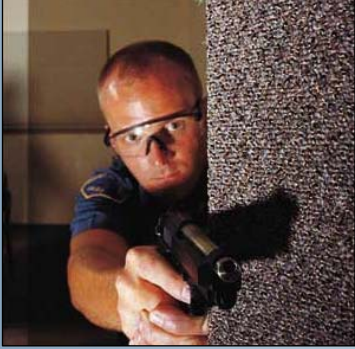

The weapons have a rechargeable battery fitted within the magazine with a switch and plug in point. A fully charged weapon can last for several weeks of training. These conversions are a very robust solution and require little on-going maintenance.

The modifications are permanent and the weapon cannot be reverted back to a live weapon. Modified weapons are delivered with a Deactivation Certificate from a UK Proof House.

Dry Fire Conversions are available for most weapon types, subject to confirmation.

AIRSOFT WEAPON

CONVERSIONS FOR PRISim®

AIRSOFT RIFLE WEAPON CONVERSIONS

Airsoft weapons are realistic, non-lethal, shooting replicas of actual firearms. Airsoft weapons mimic the appearance and functionality of their real-steel counterparts. They look, feel, weigh and function similar to the actual firearm. Often, the only way you can tell apart a "real steel" firearm and an Airsoft gun is when you pull the trigger.

AIS can provide the Airsoft G36C compact, MP5 and AK47 assault rifle for use with your PRISim® judgment training simulator. The weapon's barrel is modified to take an AIS eye safe laser insert. Power for the laser is supplied by a nickel-cadmium (NiCad) battery pack. A charger is also included.
