"The most realistic firearm simulation"

Realistic Recoil

The 9mm RecoilRound Aircartridge provides realistic cycle of operation and recoil of semi and fully automatic firearms. The RecoilRound is a patented training alternative to ammunition, using compressed air as its propellant. With the RecoilRound system the chamber is shortened so a conventional, lethal round cannot be fully chambered.

Key Features

- The RecoilRound is the most realistic way to simulate firearm recoil and cycle of operation during simulation
- Firearm ejects the simulated round to provide increased realism
- Basic hands-on training in safe weapon handling
- Requires changing of magazine after existing rounds are spent. Rounds are recharged onsite individually
- The internal components of the RecoilRound Aircartridges are factory guaranteed for a minimum of 500 shots
- RecoilRounds can be deliberately made to mis-fire, forcing officers to carry out weapon handling drills to clear stoppages during a training session
- Sight disruption comparable to live fire
- Aircartridge technology is clean and reliable
- Dedicated kits with special barrels for specific 9mm calibres of semi and fully automatic firearms

Available Recoil Kits

- Beretta 92F
- Beretta PX4
- H & K USP 9mm/40
- Glock 17/22—full size
- Glock 19/23—compact size
- SIG Sauer 226 & 229
