

ELECTRONIC RESTRAINT DEVICE AND LESS LETHAL OPTIONS

Safe and effective
training with less-
lethal devices

Modified Taser™
features working
light and visible
aiming laser for
increased realism

Interchangeable
head attachment
means trainees
can practice
changing heads
during training

Reusable heads
generate **cost**
savings compared
with conventional
Taser™ training

ELECTRONIC RESTRAINT DEVICES

In providing our customers with up-to-date training tools, AIS offers the most realistic simulation-adapted Electronic Restraint Device on the market.

With statistics providing strong evidence that Electronic Restraint Devices are necessary to reduce the need to engage in lethal force, it becomes important that law enforcement agencies and security organisations provide effective training to their personnel in these less-lethal devices.

PRISim® MODIFIED TASER™

AIS can provide the laser-modified Taser™ X26 for use on your PRISim® training simulator. The modified Taser™ comes with two interchangeable heads, a functioning light and LCD, and a visible aiming laser.

AIS fits two laser inserts inside each head. The PRISim® system tracks the position of both lasers on the screen. When the trainee activates the device, and both lasers strike the target area, then the PRISim® software responds by showing the appropriate branching outcome.

Trainees quickly learn how to deploy this less-lethal device at the correct engagement distance and can practise engaging static and moving targets for added training realism.

The PRISim® modified Taser™ X26 is completely safe to use.

TRAINING SO REAL, YOU WON'T CALL IT A SIMULATOR

The PRISim® system is a full-featured judgment and evaluation training tool that develops the skills required by law enforcement, security and military personnel, who are armed with both lethal and less-lethal weapons.

PRISim® produces exceptionally realistic video-based environments for all aspects of firearms handling including marksmanship, decision-making and tactical deployment. PRISim® utilizes broadcast-quality DVD technology to create vivid digital environments that are as close as you can get to the real thing.

A PRISim® simulator delivers all the hard realities of a real operational encounter. The judgment calls, indecision, sudden fear, partial understanding, blind side surprise and eye-blink response are all part of the training experience that conditions the trainee for survival.

ELECTRONIC RESTRAINT DEVICE AND LESS LETHAL OPTIONS

OTHER LESS-LETHAL OPTIONS

Our PRISim® laser-based systems support training with other non-lethal and less-lethal devices including:

- OC Spray
- Flashlight
- Weapon Mounted Flashlight

CHEMICAL SPRAY

A laser-equipped OC spray canister for use with laser-based PRISim® training systems. The canister's laser is coded so that when the trainee activates this less-lethal device, the PRISim® software responds by showing the appropriate branching outcome (hostile is sprayed).

FLASHLIGHT (Variable Lighting)

Instructors can vary the lighting in any scenario, converting your PRISim Suite® training into a night time or lowlight situation. With a flashlight, trainees can illuminate areas on the screen, learning to address threats under low light conditions (handheld or weapon mounted).
